

BI-TRON Indemnity

I Christopher Malyszewicz of "Chemical Solutions Consultancy International" have thoroughly examined the range of the Bi-Tron products for corrosion and metal attack, and have found them well compromised with Calcium Sulphonate buffers which neutralise any acid residues.

Hence NO damage would result in ANY engine whether it be Petrol or Diesel as regards mechanical or chemical damage, correlated with the Bi-Tron range of products, as they are considered innocuous towards the engine.

I am satisfied with the overall performance and chemical characteristics of the range that they meet all standards of compliance and regulatory details for world-wide patents and will not cause any damage whatsoever to Petrol or Diesel engines.

Regards,
Chris Malyszewicz

BI-TRON Performance

I Christopher Malyszewicz of "Chemical Solutions Consultancy International" have tested the Bi-Tron range of products and am satisfied that they are the best petroleum products available in the World.

They have been specifically formulated to meet the European and American markets and hence the brilliant performance and fuel savings they give when used in conjunction with each other.

They have proved to dramatically lower the smoke emissions by improving combustion, hence power and performance. This in turn will give automatic fuel savings of between 8 - 10% guaranteed by the emissions test.

I am satisfied with the overall performance and chemical characteristics of the range that they meet all standards of compliance and regulatory details for worldwide patency.

Regards,
Chris Malyszewicz
