

BITRON TREATMENT of AUTOMATIC TRANSMISSIONS

Vehicles with automatic gear boxes and limited slip diffs should be treated with Bitron EP40 Powertrain Treatment. If the vehicle has done over 80,000 klms the automatic gear box and the limited slip diffs need to have the oils fully drained and, then, flush out the boxes to remove the build up of sediment (burnt oil and metal) in the boxes.

Refill with new oil and add the Bitron EP40 at the rate of 5% to the volume of oil in each box.
