

**GREENHOUSE NEUTRAL FOUNDATION**  
***Mitigating Our Global Impact***

***The Greenhouse Neutral Foundation***  
***Supports and Endorses Bitron Lubricants***  
***in their mission to advance “Tomorrow’s Solutions Today”***

**Bitron is at the forefront of technological advance to reduce the emissions created by the use of fossil fuels in transport and machinery applications. Efficiencies achieved with the addition of the Bitron product provide the end user with an environmental footprint that is vastly reduced and hence the overall environmental impact and the reductions of climate changing greenhouse gases associated with the burning of fossil fuels are greatly reduced.**

**The Foundation applauds and similarly endorses those who are taking a proactive stance to address this pressing global concern of reducing CO2 discharge. A close relationship has been formed with Bitron as a ‘Green Partner’ of the Foundation. We would wish this at this time in discussions between Bitron and the Government of Fiji for our endorsement of Bitron to be publicly stated.**

**The Government of Fiji may indeed see its nation’s overall emissions output in the international perspective of total global emissions as of minor concern. However, the fact that the Government is addressing this with such focus exemplifies leadership that many other nations worldwide, large and small, should envy.**

**The Foundation applauds the Fiji Government and all those associated with bringing this benchmark emissions reduction project and the Bitron product implementation to fruition.**

**The Foundation supports initiatives in the reduction of emissions through its international supporters such as the United Nations Environment Program and other global connections.**
